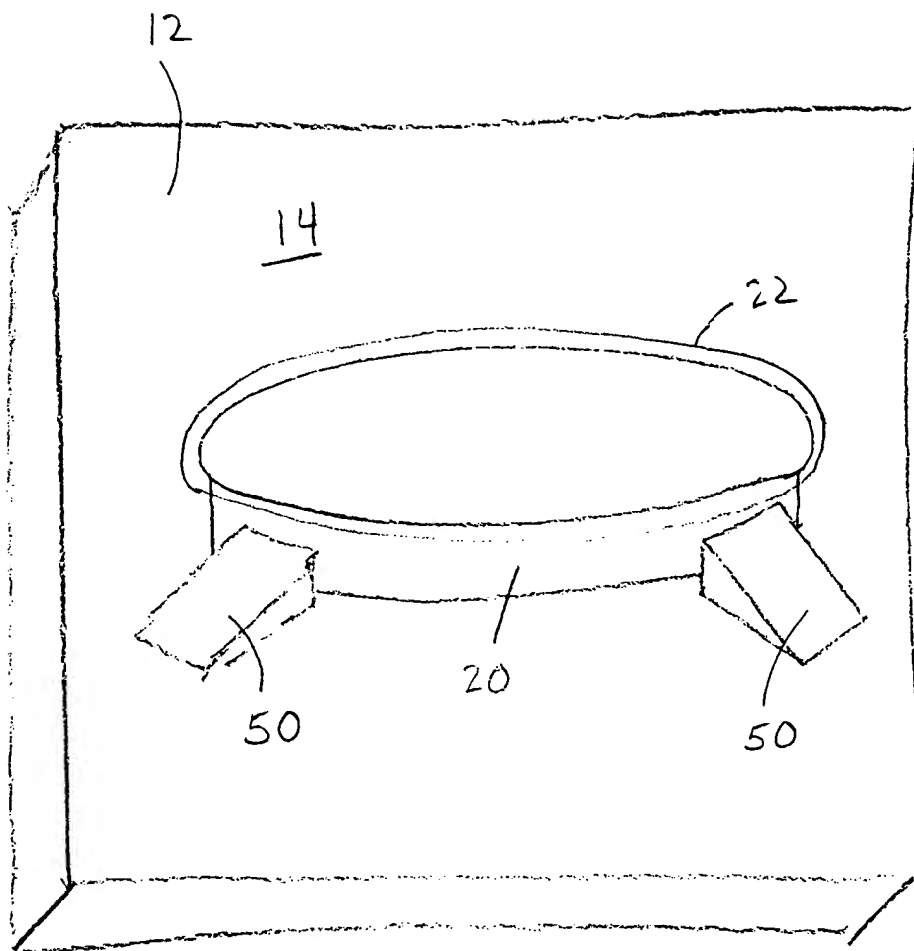

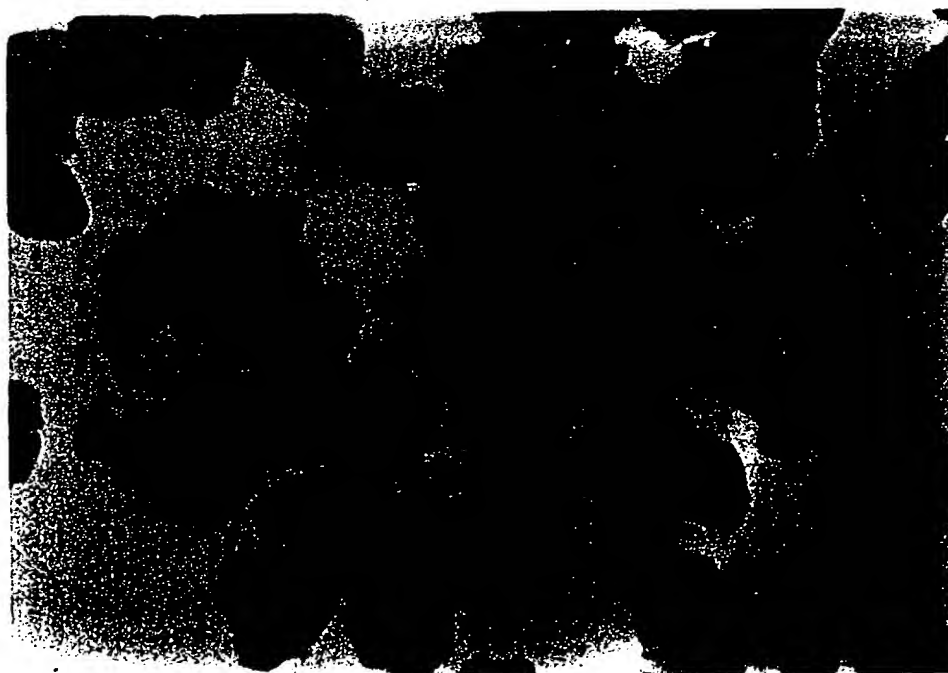

Fig. 5

This is a high-contrast, black and white image, likely a scan of a document page. The image is characterized by a dense, grainy texture. The background is a light gray, speckled surface. Overlaid on this are numerous dark, irregular shapes and spots of varying sizes. These dark areas are most prominent in the upper half of the image, where they appear as large, dark, blotchy regions. In the lower half, the dark spots are smaller and more numerous, scattered across the light background. The overall effect is one of extreme contrast and noise, typical of a low-quality photocopy or a scan of a heavily degraded document. There is no legible text or identifiable figures present.
